## Improvements

Delete

0%

- ☐ Preload photos
- ☐ Progress instead of static forms
- ☐ Cordova -> Capacitor
- ☐ Automatic error reporter
- ☐ Load balancing
- ☐ Api gateway Azure API Management or Ocelot
- ☐ Retry policies (both client and api) (for example to db)
- ☐ versioning
- ☐ Health check / monitor <https://www.youtube.com/watch?v=vw3hcnSA1Y&t=2s>
- ☐ Automatic scaling
- ☐ Store secrets with Secret Manager or Azure Key Vault
- ☐ Orchestrators
- ☐ More restricted linting

- ☐ Native photo choose instead of web view. crop method for image cropper is really heavy and doesn't show loading. I should change this component for something else, native image picker <https://ionicframework.com/docs/native/camera>
- ☐ Choice = Beer to something more specific like "One beer please"
- ☐ More native components: <https://medium.com/@chunchuanlin/android-vs-ios-compare-20-ui-components-patterns-part-1-ad33c2418b45> and <https://medium.com/@chunchuanlin/android-vs-ios-compare-20-ui-components-patterns-part-2-3edba2076b25>
- ☐ Checkbox check all button
- ☐ Edit existing meeting request and check again if there are people
- ☐ Normalize html - <https://tutorials.comandeer.pl/html5-blog.html>
- ☐ Add animation to chat (fade)
- ☐ Gradient chat background
- ☐ Quick routing break animation
- ☐ Gestures to hide modal and iframe (swipe down), tabs
- ☐ Popover for copying text in chat
- ☐ Select Input has long scroll on edit profile
- ☐ Chat text suggestions under input
- ☐ Log query responses
- ☐ Add user details to log
- ☐ Validation for datetime with empty string returns 500 (and validation can fail before mediatr (eg. if datetime is string - controller thrown error which is not handled)
- ☐ nswag for automatic docs <https://www.youtube.com/watch?v=vw3hcnSA1Y&t=2s>
- ☐ Bootstrap to boolma (<https://bulma.io>)
- ☐ better loading experience
- ☐ all disabled fields same gray color
- ☐ service is unavailable error
- ☐ dont use userid = 100, instead create own Context for this test set
- ☐ Move authentication outside of app layer - [🔗 JasonGT/NorthwindTraders: Issue #76](#)
- ☐ 24h/ without activity will remove you from group
- ☐ Picker instead of bootstrap modal - <https://ionicframework.com/docs/api/picker-controller>
- ☐ Show keyboard instantly on chat
- ☐ infinite scroll chat / better button to see older messages / listen for scroll top and if 100px then load older
- ☐ client signalr reconnect policy

- ☐ Allow sending message only if connected client
- ☐ Keep messages on client
- ☐ scroll down chat client on enter
- ☐ e2e tests for controllers
- ☐ dont refresh entire meeting if leave/added
- ☐ remove word Command/Query from cqrs (CreateUserCommandHandler -> CreateUserHandler)
- ☐ scroll top on change tab
- ☐ == null to is null
- ☐ create scripts instead of running directly dotnet run for travis, Add scripts for apps to simplify process (run, tests, add migration, update db)
- ☐ local notifications (if app is in background but not closed)
- ☐ show if user is online
- ☐ remove timeout from notifications settings (im not sure if this necessary now)
- ☐ push notification endpoint (it requires adding language to topic like all-pl or ios-pl)
- ☐ meeting should not be send though push for all user devices (one user with two devices)
- ☐ Set year dynamicly to mails
- ☐ Use Layouts in mails
- ☐ empty profile - add some content
- ☐ "I use apple i dont care about platform notifications" - simplify these settings
- ☐ use meeting page instead of profile after load
- ☐ Cancel i Done w language and notifications
- ☐ Delete icon on profile edit with white picture is invisible
- ☐ find good day and hour for deployment
- ☐ performance tests
- ☐ health checks from website
- ☐ mail redirect [contact@skelvy.com](mailto:contact@skelvy.com) -> [contact.skelvy@gmail.com](mailto:contact.skelvy@gmail.com)
- ☐ rate app popup
- ☐ report through app instead of email
- ☐ toast is under modal
- ☐ remove report user to "..."
- ☐ android transparent statusbar
- ☐ remove www from readme

- ☐ rename skelvy -> Skelvy
- ☐ Improve google analytics for mobile with route tracking and UserId
- ☐ add change email patch with verification
- ☐ update to core 3
- ☐ Create method for admins to generate information report through rest
- ☐ Admin send email to all and send notification to all
- ☐ Update only changed photos and order
- ☐ Show alert on sign up that account has been deleted/disabled
- ☐ If user is deleted and he tried to login then remove this flag
- ☐ Bug reporting from frontend with logs - Sentry
- ☐ Refresh token on server side (if user ask for it then check in db if there is refresh token for this user id - for example in logout to not pass refresh token on every request)
- ☐ refactor switchmap nesting for auth interceptor
- ☐ Remove overwrite from cQRS handlers somehow
- ☐ Add text logo for email to api instead of getting it from wordpress
- ☐ jmeter for performance testin
- ☐ self loading instead of resolver for front
- ☐ Add your message instantly - don't broadcast your message to yourself
- ☐ leave/find messages/find meeting/remove request - should send which meeting - change first or default with status to ID
- ☐ Remove automapper from the project (and empty constructors from dtos)
- ☐ instead of keeping status in meeting request if db is looking for all Searching reduce all by removing all from meeting user + removed. Safer but request is more complex (for removing request user will be forced to send meeting request id - too expensive to check all meeting users)
- ☐ SQL for Request FindOneMatchingUserRequest One request, Meeting FindOneMatchingUserRequest One request, Meeting FindOneWithUsersDetailsAndDrinkByUserId without Removed Users [  [Improve repositories](#) ]
- ☐ find meeting FindOneWithUsersDetailsAndDrinkByUserId should not return self user
- ☐ move to dapper - <https://www.davepaquette.com/categories/Dapper/>
- ☐ remove/leave/disable - try to match again
- ☐ automatic sending errors if 500 (create endpoint and db table) on front
- ☐ gradient icon

## ☒ Features

Delete

0%

- ☐ Ads
- ☐ Sports instead of only drinking
- ☐ Followers & Following (meeting only with - notify them that you are looking for people to meet)  
[username needed and possibility to block for notifying]
- ☐ Make meeting requests one to many
- ☐ Hint to change preferences for meeting
- ☐ Block other users
- ☐ End of meeting
- ☐ dark mode
- ☐ More than one meeting at once
- ☐ Fix group size
- ☐ Remote configuration
- ☐ Meet again same people
- ☐ Meet now! Distance (center of 4 dot - complicated algorithm to reduce amount of people to check)
- ☐ Meeting sign
- ☐ Photo of meeting - with wall like in fb
- ☐ Find only girls/boys
- ☐ Mailing to all users (pass text and title)
- ☐ AB Tests
- ☐ Meeting challenges (eg. have a 100 meetings)
- ☐ Show days in calendar where they are already requests or not full meetings
- ☐ Explore where you can meet people and where you can rent the place
- ☐ JPK - Jednolity Plik Kontrolny
- ☐ Ads like jakdojade on search

To api gateway with monolithic app - what if one copy check if something doesn't exists and then second copy add new record to this while first one still think that it doesn't. How to solve this issue?
